Languages

English

Polish

Junior Full-Stack Developer with experience gained as a freelancer and in team projects. I am studying Computer Science at UMCS in Lublin, developing my skills in object-oriented programming and web applications. I work with React, Spring Boot, REST API, and process automation. I want to continue developing my skills and creating solutions with a real impact.

Projects

Portfolio   November 2024 - Currently
🔗 Repository

Technologies: Tailwind CSS, React, Bootstrap, TypeScript, Vite
Description: The project is a fully custom portfolio that presents information about me, my skills, and my experience. The website is designed from scratch, without using pre-made templates. The project is optimized for performance, code readability, and responsiveness, ensuring smooth operation on various devices.
Website: https://wiktormalyska.ovh

PortfolioProjectsAPI   February 2025 - Currently
🔗 Repository

Technologies: Spring Boot, Hibernate, MariaDB, REST API, JUnit, Mockito
Description: PortfolioProjectsAPI is a server-side application created in Java using Spring Boot, Hibernate, and the MariaDB database. Its main purpose is to read project descriptions directly from a user's GitHub profile. The project is fully tested with both integration and unit tests.

Technologia Cyborga   October 2024 - Currently
🔗 Repository

Technologies: React, TypeScript, React Query, Docker, Jenkins, Spring Boot, Hibernate, MariaDB
Description: An innovative communication application integrated with games, allowing users to unlock new features through gameplay. The project is carried out by a five-person team, where I serve as the leader and frontend manager. We use a modified Agile methodology, focusing on flexibility, rapid iterations, and cross-functional collaboration.

Pharmacy System Project   October 2024 - February 2025
🔗 Repository

Technologies: React, TypeScript, React Query, Bootstrap, React Styled Components
Description: A pharmacy management system developed by a three-person team. I was responsible for the frontend, creating the user interface in React with TypeScript. Additionally, I handled the implementation of CI/CD processes, ensuring automation of the build and deployment of the application. The backend was implemented in Spring Boot by other team members.
